

The Gospel in a Nutshell

Instructions for Gospel in a Nutshell

Carefully crack open a walnut shell and remove the nut.

Get a 3/4 inch brass hinge from a hardware store.

Epoxy the hinge in place with the walnut shell closed.

Be careful not to get any epoxy in the moving parts of the hinge.

After the epoxy sets, the walnut shell should open and close easily.

Set type on a computer. Use larger type in bold for the first letters so the word GOSPEL shows up well. Spray both sides of the paper with clear protectant.

Cut out the two typed elements making sure they will fit inside the shell.

Cut two pieces of cardboard (from back of scratch pad) and glue everything in place.
